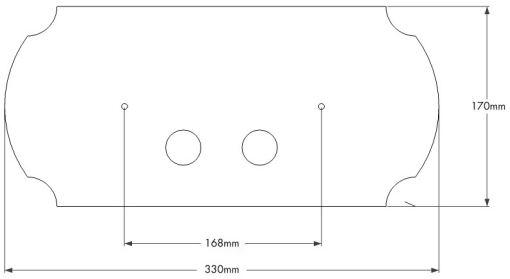
Claremont Brushed Nickel Flush Plate



Specifications

• Finish: Brushed Nickel Electroplated
• Material: Brass
• Made in Italy
• Suites Geberit Sigma 8 Inwall Cisterns such as codes: 109.795.00.1 and 111.698.00.1
• Mechanical flush (not pneumatic)
• Due to the nature of a Geberit cistern having offset valves, the flush button will sit slightly offset 8mm to the right of the centreline of the toilet.
• The flush plate needs minimum 20mm from face of cistern to the face of the wall. So it is best this flush plate is installed on to a tiled wall. If installed on wall without tiles, the flush plate will need to be installed with a 10mm hidden "bracket" made from some sort of water resistant board to hold it away from the face of the wall
